

CURRICULUM VITAE

Personal Details

Name: Nicolas Luitingh
Nationality: Australian
✉: nicolas.luitingh@gmail.com

Career Summary

Nicolas discovered his passion for organising and planning during his study years where at age 17 and with local council and police support began organising and managing a series of youth events for up to 1000 people. Following his tertiary studies in engineering management, he turned his full attention to the construction and mining industry where he took advantage of his professional qualifications, enthusiasm and dynamic personality in producing results and adding value in both planning and project control specialist roles. During his lead planning roles at Airport Link, Eagle Downs Coal Project and Rio Tinto's Clermont and Kestrel Coal Mines, he used and developed a variety of project controls systems and tools giving him a wider "best method of approach" to project control challenges. As a result, Nicolas was recruited by Rio Tinto to perform in an advisory role where he focuses on building relationships with people across a wide variety of projects as part of a strategy to achieve desired project outcomes consistently and across the company.

Key Clients
